Amendments to the Specification

Paragraph spanning pages 6 and 7:

The threaded member 13 is enclosed by a stacking protection sleeve 18 made of a soft plastic material between the chair leg 5 and the connecting plate 9. In addition, a stacking protection buffer 19 is attached to the lower side of the connecting plate 9, at the end thereof which faces away from the chair leg 5, by means of a push-fit connection 20. The stacking protection sleeve 18 and the stacking protection buffer 19 are stacking protection members via which the chair 1 abuts adjacent chairs 1 in the stacked condition. In this way, the seating member 4 on the one hand and the chair legs 5 on the other are protected when the chair 1 is stored in a stack.
